

3D Design Desktop

For design organisations, managing and supporting employee desktops and applications costs time, resources and money. Every security patch, update, upgrade or new application has to be tested, installed and supported and that burden only gets worse as your headcount increases. Add to that the constant need for newer, faster hardware with each new software release.

There is a better way

The entrust 3D Design Desktop moves your entire IT experience to the cloud. We take care of the service provision, backup, disaster recovery, updates and support and you just get on with business. Simple.

What is the 3D Design Desktop?

An entrust hosted desktop is first and foremost a Microsoft Windows desktop, in fact it's no different to your current Windows desktop today.

A 3D hosted desktop is your Windows desktop, but not tied to a single PC or laptop. It gets placed in the cloud. However, unlike our standard Hosted Desktop products, the 3D designdesktop supports modern CAD software like Autocad, Artiscad, SketchUp and others – enabling full design and modelling from the cloud.

Once your desktop is in the “cloud” you can access it from ANY device and from ANYWHERE and at ANY TIME. All you need is an internet connection. The same applications and files, looking and acting the same as before but no longer tied to your office, or your home PC. Complete mobility.

If you want:

- Access to your applications and data from any location, at any time and from any device
- Access to a highly trained support team on the telephone and over the web
- High levels of security, availability and disaster recovery
- An IT service that flexes as your organization does, with charging that reflects your usage
- Multi-site collaboration ability or greater levels of mobile working
- CAD capabilities including 3D modelling + VR walkthrough

Then an entrust Hosted Desktop is for you.

But won't the performance be terrible?

Actually no. All the work is being done at our datacentres and the amount of data exchanged is relatively small. Also, the software used to handle this is very clever and it compresses the data even more to make the whole process as efficient as possible.

In fact, it's so efficient that you can create a design and review it in 3D inside the 3D design desktop and it will look and feel like it is all happening locally.

Is it secure?

We only deliver our services from UK datacentres with an ISO 27001 (information security) certification and all the information exchanged between our locations and yours are encrypted to the highest possible commercial standard.

Hosted Desktop Options & Features	3D Design Desktop Standard	3D Design Desktop Power
Description	CITRIX based Hosted Desktop with 8:1 contention, suitable for most services organisations using desktop apps (Quickbooks, Sage, Payroll, CRM)	CITRIX based Hosted Desktop with 4:1 contention, suitable for services organisations with heavyweight applications or analytics processes
Costs from	£123.50 per user per month	£156.50 per user per month
Full Windows Desktop	Y	Y
Any device accessibility	Y	Y
Line of business application integration	Y	Y
UK based data centres with ISO 27001 accreditation	Y	Y
