entrust Online Backup

You already know that your business data is one of the most important assets of your company, an asset that you cannot afford to lose. If your company backs up data only where it is created, i.e. within your office premises, important information could be lost if a disaster strikes. The most effective method to protect your data is to back up to an offsite location, however, for small to medium organisations, creating a sensible backup solution can be complex and expensive, plus, it needs constant testing to ensure it will deliver in a crisis.

For most organisations an online backup service will meet all your requirements, at a sensible cost.
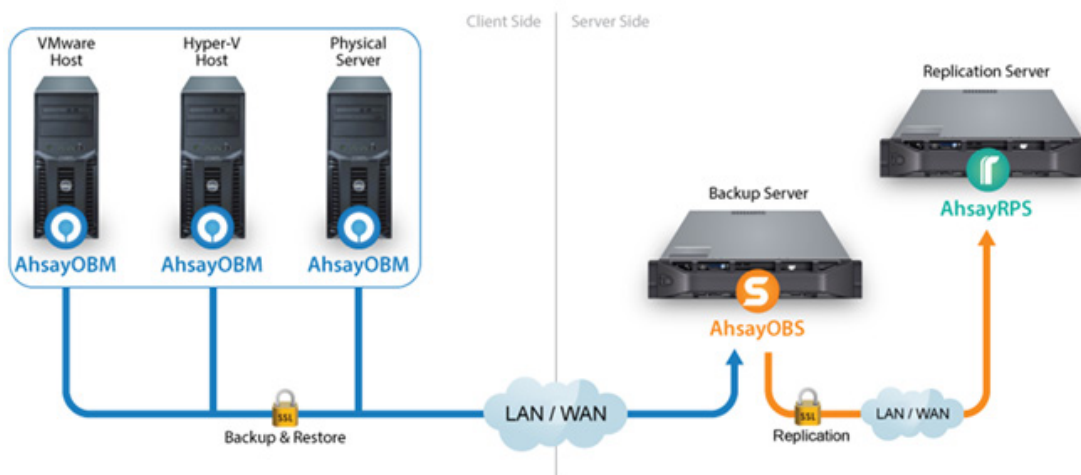

What is online backup

Online backup means to back up data from your workstation or server to an entrust datacentre using your internet connection. Online backup is usually chosen as part of a business disaster recovery plan, as the data remains safe should your office be at risk from disasters such as fires, flood or employee theft. Our online backup service leverages cloud computing to create an off-site storage solution with almost no hardware requirements, suitable for an organisation of any size.

Benefits of the entrust Online Backup service :
• 24/7 Fully Managed Service
• 256-Bit Military-Level Encryption
• Anytime & Anywhere data restoration
• Highly Secure and Controlled Datacentres, ISO27001 certified
• Comprehensive Backup Features Provided by entrust Backup Software
• Backup Data with Replication for Added Protection
• 10GB Backup Storage for FREE

How does it work?
Using your high-speed Internet connection, you can choose specific files or the entire contents of a hard drive to back up to our data centre, using the entrust Online Backup Manager (OBM) software. You can choose to have files automatically saved to your online backup on a regular basis by scheduling backups at specific time or your files can be automatically backed up when changes are made. We provide a management console to access the data and to monitor the health of your backups. The backed up files are encrypted and stored in our data centres. You can download and use the data backup or browse the archived files directly on your computer. You can restore an entire backup or just specific files using the same management console.

entrust Online Backup	Workstation	Server
Initial Setup	£25 Per Workstation	£75 Per Server
Up to 10GB	£3.00 per Gb	
Up to 20GB	£2.50 per Gb	
Up to 40GB	£2.00 per Gb	
Up to 75GB	£1.80 per Gb	
Up to 150GB	£1.50 per Gb	
151GB to 200GB	£1.25 per Gb	
Storage above 251GB	Price on application
