# Citrix Content Collaboration:
# Document Sharing built with security in mind

entrust*IT* is a certified Citrix partner, making us a perfect choice if you're looking for Citrix Content Collaboration.

Citrix Content Collaboration is an enterprise file synchronisation and sharing (EFSS) platform designed from the ground up with **security** in mind. Consumer grade file sharing options such as Dropbox and Google Drive have proved extremely popular, and also have a 'business' offering. However, the security measures on these are simply not strong enough for a business with security compliance concerns.

Citrix Content Collaboration returns power to your IT department, allowing them to set the security policy for document sharing within your organisation. This includes restricting document access for certain users and password protection that follows a document.

While your IT department is happy with the security, your staff will be pleased with its deep integration. Citrix Content Collaboration integrates with Office 365 meaning documents can be sent directly from Citrix Content Collaboration within Outlook and can be edited my multiple users in real time using Microsoft Office. The built in content editor lets workers create, review and edit Microsoft Office documents and annotate Adobe PDF files right from Citrix Content Collaboration, even while offline.

Furthermore, Citrix Content Collaboration's Outlook plug-in allows emails to use links for files above a certain size, allowing files up to 100GB to be shared – this is vastly greater than the 20MB attachment size limit in Outlook.

## Who Is It For?

Citrix Content Collaboration is a perfect option for businesses concerned about data security and compliance. Its security management tools allow your IT department to set company-wide security police and keep on top of which users have access to which files.

For businesses with a number of remote workers, or workers who frequently travel, Citrix Content Collaboration is perhaps the best way to review, edit and store documents both online and offline. The collaborations tools built in allows workers to make changes together in real time, no matter their location.

## Why Choose entrust*IT* for your Citrix Content Collaboration Install?
