Video*IT* Essentials

Based on the CamCloud platform, Video*IT* Essentials is a hardware-free Cloud CCTV solution that makes video surveillance simple, effective and available for all organisations.

The platform has been designed to allow you to work with the cameras you want, with direct streaming from it to the cloud based hosting. As the service is cloud-based you can connect your cameras from an unlimited amount of physical locations.

No more complex on-site hardware is required, and all your media from all your cameras is stored in a single, secure location. Wed based and mobile apps mean that to access and manage your surveillance footage and data, all you need is an internet connected device.

Camera Health Check and motion alerts take the pressure off your business by telling you when there's a problem with one of your cameras. These alerts are centrally managed and will be sent to either your mobile device or email.

Video*IT* Essentials is ideal for:

•   Sites with low numbers of compatible IP cameras
•   Businesses with reliable bandwidth and >1MB internet speeds
•   Businesses that don't need to manage their bandwidth
•   Sites with access to a broadband router for port forwarding

Video*IT* Advanced

Based on the Eagle Eye Networks platform, Video*IT* Advanced is a flexible, scalable and always up-to-date Cloud CCTV solution that has been designed for the cyber-security conscious customer.

With a multiple frames-per-second rate, you can expect high-quality stored and live video recordings. These can be viewed and managed remotely on web based or mobile apps, so you are able to check in on your business from across town, or across the country.

Video*IT* Advanced requires sufficient internet bandwidth, as well as a bridge on-site that will analyse video streams, detect any camera issues and transmit camera and system status information. The intelligent bandwidth management feature within it means that upload handling is dealt with for you, at a time that won't interrupt your business' day-to-day activities by putting pressure on your internet speeds.

Biometric two-factor authentication for access to the portal enhances the security of the solution by adding that 'extra layer'. Not only will it minimise the chance of a third-party observing you entering in a password, but make login more secure and convenient.

Video*IT* Advanced is ideal for:

•   Larger organisations with more complex security requirements
•   Organisations requiring a larger number of cameras

QUICK AND EASY DEPLOYMENT

entrust*IT* are able to handle the complete installation of your Cloud CCTV. We offer a variety of installation services, including:

•   **Site evaluation and system design to accommodate your specific needs**
•   **Installation of cabling power, network connections and other components**
•   **Installation of IP camera hardware and software**
•   **System configuration**
•   **Ongoing system maintenance**
•   **Technical support**
•   **Seamless integration with your existing network**

What about pricing?

Video*IT* Essentials	7 days image storage	30 day image storage	60 day image storage
Monthly service charge inc. remote support	£15 + VAT pcm per camera	£20 + VAT pcm per camera	£30 + VAT pcm per camera

720p QUALITY Monthly service charge inc. remote support	£9.99 + VAT pcm per camera	£15.99 + VAT pcm per camera	£19.99 + VAT pcm per camera	£29.99 + VAT pcm per month
1080p QUALITY Monthly service charge inc. remote support	£20 + VAT pcm per camera	£25 + VAT pcm per camera	£35 + VAT pcm per camera	£39.99 + VAT pcm per camera
Pre installation site survey	£170 + VAT			
Initial equipment install	£340 + VAT			

Something to note:

Although the prices for Video*IT* Advanced pcm per camera are cheaper, this Cloud CCTV solution requires an on-site DVR. As a result, the prices do end up being more than Video*IT* Essentials. Prices for on-site DVRs are available upon request once we know your requirements.
