

Case Study - ClickNetherfield

Client Profile

www.clicknetherfield.com

Industry: Design and Manufacturing **Staff**: approx 90 staff **Locations**: Scotland, UK

Display case manufacturers to HM The King and the world's museums

HM The King

Display Case Manufacturers For nearly twenty years, ClickNetherfield has designed and built glass display cases for some of the world's best known museums. Boasting clients such as The British Museum, Science Museum and the Musée du Louvre, as well as a Royal Warrant from Her Majesty The Queen, it is clear that ClickNetherfield are leaders in their field.

Based in Livingston, Scotland, ClickNetherfield exports all over the world. When presented with a problem for their future growth, it was natural that such an outwardlooking company would look to the global supply chain for the solution.

The Problem

ClickNetherfield design all of their museum cases inhouse, which requires high-performance workstations and many highly skilled staff to operate them. ClickNetherfield's solution was opening up a design team in India – but they needed a solution for providing these new staff with the tools for the job.

"We had previously handled all of our IT needs onsite" comments Andrew Paul, Business Systems Analyst at ClickNetherfield. "Whilst that had worked, we were conscious of the large costs associated with CAD workstations and how that could be supported considering our goal was to increase our workforce in India."

ClickNetherfield tried a number of avenues, including outsourcing to other design studios. However, they still wanted full control over their data, and could not guarantee its safety in an outsourced scenario. They eventually came across entrust/*T*, who had exactly the solution to fit their needs.

The Solution

When ClickNetherfield came to entrust/*T* and described their problem, the technical team had exactly the right answer. Experience of dealing with clients with similar issues to ClickNetherfield highlighted that they needed a solution that could provide access to CAD computing power, all over the world, at a fraction of the cost of the competing solutions.

The answer was 3D Design Desktop. The solution has won many plaudits since its introduction to the UK market in 2016 and promises design companies with power and flexibility that was previously thought impossible.

3D Design Desktop is a Cloud Workspace accelerated with high-performance graphics. Using custom built, high performance servers with specialist GPUs for improved rendering, the 3D Design Desktop allows complex 3D designs to be created and previewed in a virtual environment accessed from base model PCs wherever in the world the user happens to be.

Because the 3D Design Desktop is cloud based, all it requires is an internet connection. The user connects using whatever device they happen to possess, and can work on CAD designs as if they were using a highperformance workstation. What's more, entrust/*T* were able to lock down design files to remove the user's ability to download them from the cloud environment, thus keeping ClickNetherfield's intellectual property protected.

The Benefits

"entrustIT worked closely with our IT team, as well as some of our other technology suppliers, to ensure that the 3D Design Desktops were configured exactly to our specified requirements" says Andrew Paul. "The results have been fantastic. Using 3D Design Desktop, we were able to open up a design team in India and the feedback we have received from them is tremendous. They love working with 3D Design Desktop."

ClickNetherfield also introduced 3D Design Desktop to some of their design contacts around the world and were surprised to receive offers for freelance work. Andrew Paul continues: "One of our previous designers moved to Finland and had to stop working for us. We showed him 3D Design Desktop and he was so impressed he offered to perform freelance work for our team from his home in Finland!"

3D Design Desktop gives ClickNetherfield unparalleled flexibility. They are now able to recruit designers from all over the world and keep their capital expenditure at a reduced, predictable monthly cost. Furthermore, all entrustIT hosted desktops include unlimited access to our support services. Our UK based engineers are all Microsoft certified and most support issues can be solved over the phone – allowing ClickNetherfield's designers to keep doing just that. "From our very first contact, entrustIT have been efficient and detailed communicators. The setup process was lengthy, but very smooth and I cannot fault the helpdesk – they are always on hand to fix problems as they arise. What's more is we have regular account management calls where we work to find the next way we can push our technology forward. I'm really pleased with the progress so far." Says Andrew Paul.

Summary

- Predictable Costs ClickNetherfield pay on a per user, per month basis and can scale up and down as required.
- **Remote Access** 3D Desktop can be accessed on virtually any internet enabled device, from any location.
- **Security** ISO 27001 data security from UK datacentres.
- **Reliability** Fail-over server technology and 24/7 monitoring prevents issues from escalating and possibly impacting the business.
- **Communication** information can now be accessed and exchanged throughout the business, ensuring further improvement in customer satisfaction.

"3D Design Desktop answered all our problems when we needed to expand. Our teams in India and Scotland love it as now they have more flexibility in their work than ever. We can finally allow our designers the option of working at home on occasion if they would prefer, which is great. As we grow, we anticipate that 3D Design Desktop will underpin that growth and allow us to remain a truly global company."
